

Color Sketch: Bringing paper creations to life!

Description

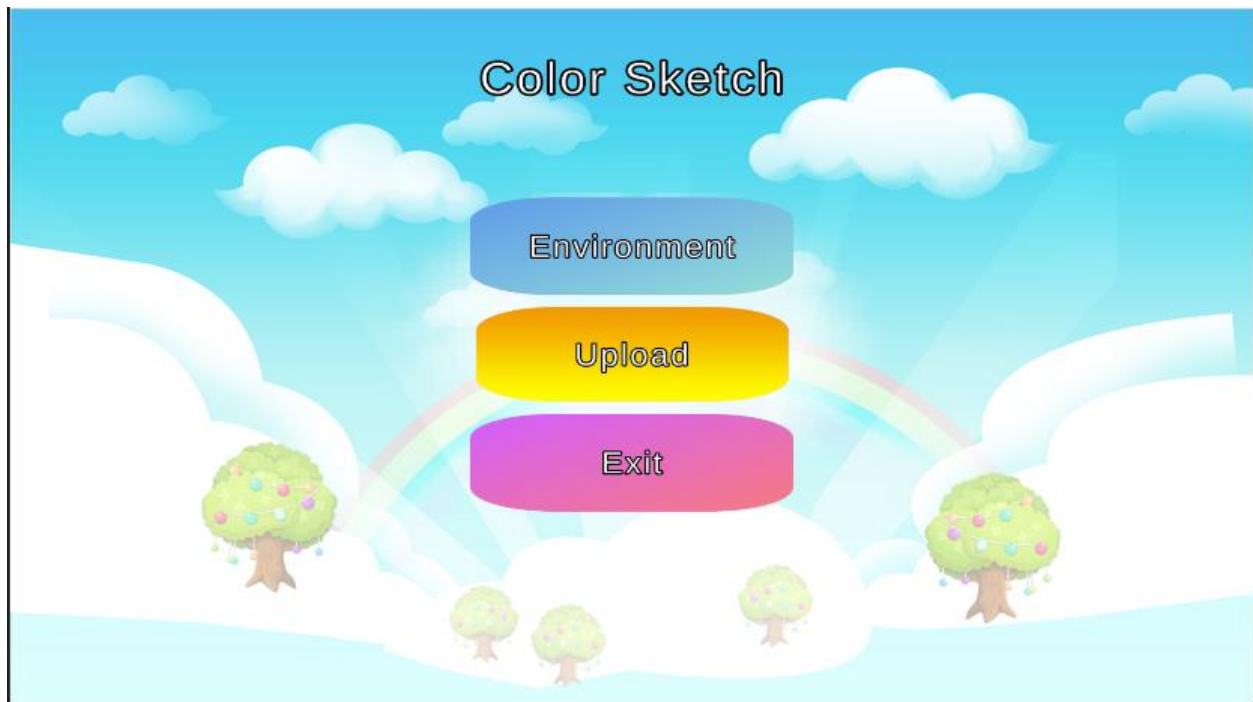

Imagine a magical app called Color Sketch, a child-friendly companion to the popular Sketch Ocean. It transforms paper coloring pages into vibrant in-game landscapes, letting kids watch their artistic visions come alive!

Here's how it works:

1. Start with a colorful canvas: Kids choose a coloring page printed with a map-like picture. It could be a bustling city, a fantastical underwater world, or even a friendly forest but there is we using monkey color map.
2. Unleash their creativity: Armed with crayons, markers, or paints, kids unleash their inner artist, filling the map with a kaleidoscope of colors.
3. Scan and play: Once the masterpiece is complete, a quick scan using the app brings the map to life! The painted colors magically appear on the map within the game environment, transforming the digital world into a reflection of the child's unique creation.

The Application

Main Menu

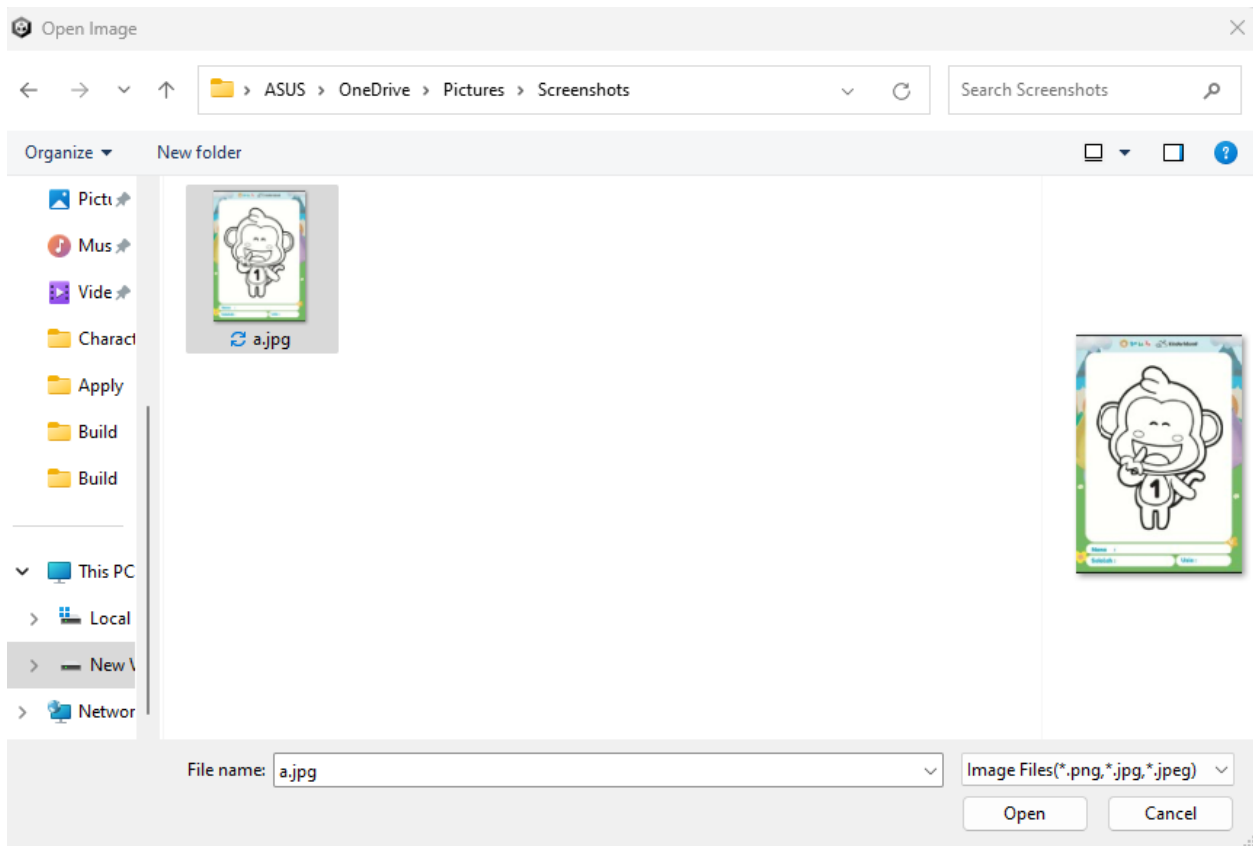

Main Menu scene is used for handling which scene to pick, there are environments used to display the environment, Upload used to upload the image that has been scanned, and exit.

Upload

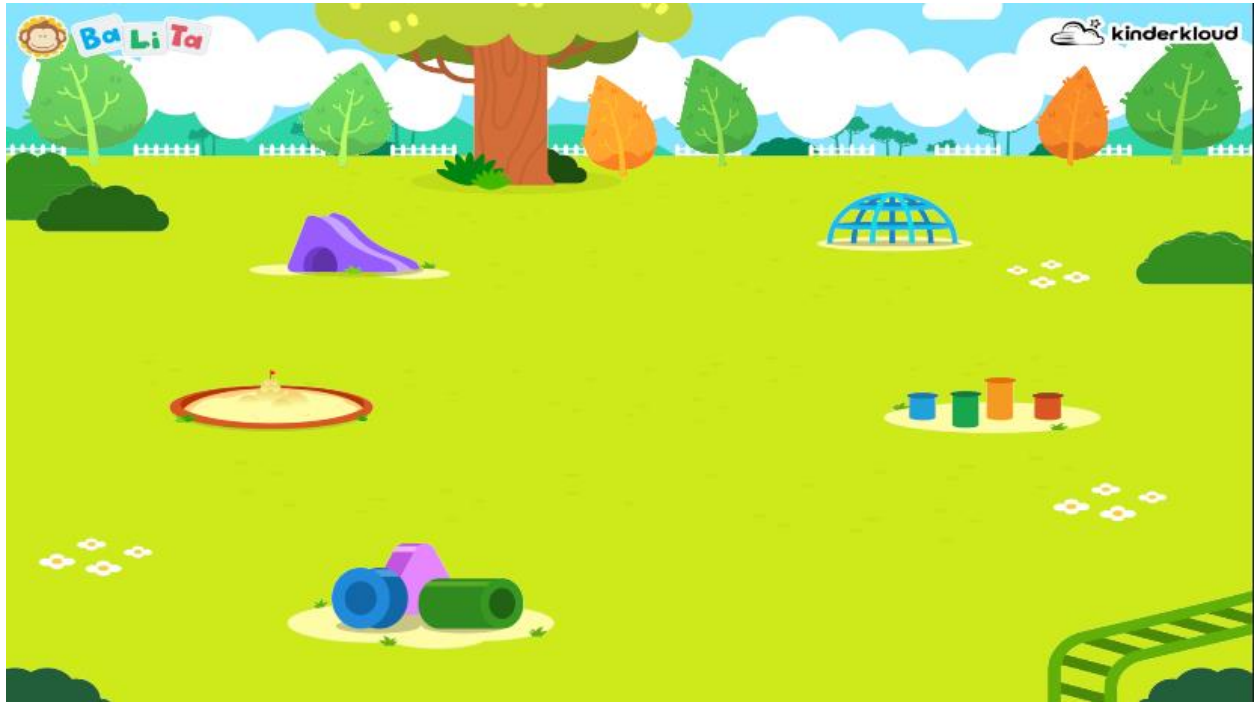

This is scene use to upload the image that has been scanned

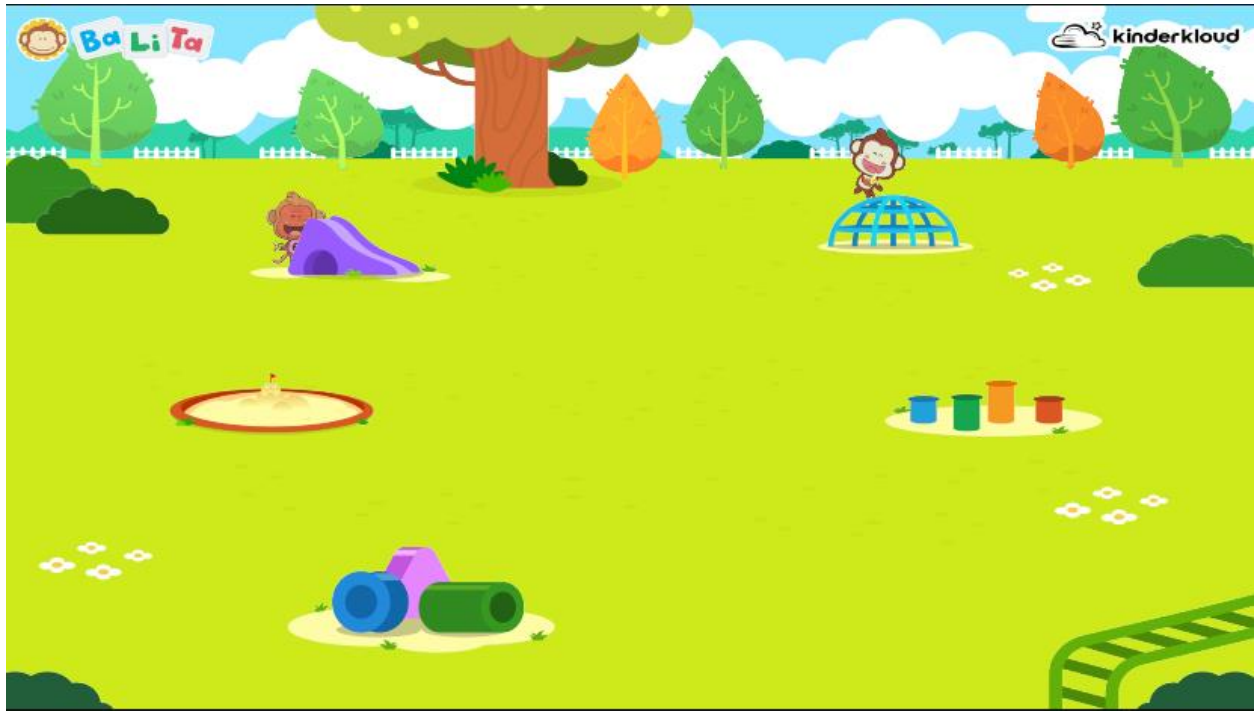

when add button clicked it will show prompt like that so just pick the image has been uploaded and it will appear on environment.

Environment

The environment is where the app is used to spawn the colored paper map as a game object and doing interaction.

this is how the spawned colored map interaction looks like
